

Rohan Malhotra

Senior AI/Backend Engineer

Summary

AI engineer with 3.5 years of experience building multi-agent LLM systems and Python backends. Led design of a production agent platform now handling thousands of daily freight exceptions. Known for moving fast and shipping under pressure.

Experience

Senior AI Engineer — Voltrix Logistics Tech (Jan 2025 – Present, 7 months)

- Designed and built the exception-handling engine end-to-end for Voltrix's multi-agent freight ops platform (planner/executor/reviewer pattern), cutting manual exception review time by 40%.
- Owned prompt design and model routing across GPT-4 and open-weight SLMs, reducing inference cost by ~30%.
- Sole architect of the retry/escalation logic now running in production, handling 5,000+ freight exceptions/month.
- Presented the system design at a company-wide tech talk.

AI Engineer — Quickship Data Systems (Feb 2024 – Dec 2024, 11 months)

- Built a RAG pipeline over carrier rate documents using LangChain + Pinecone, cutting manual rate lookup time significantly.
- Improved BOL/invoice extraction accuracy through better OCR pre-processing.

Backend Developer — Nimbus Cloud Solutions (Aug 2022 – Jan 2024, 1.5 years)

- Built Python microservices for a SaaS analytics product used by 50+ enterprise clients.
- Led a 4-person team migrating a legacy monolith to microservices.

Skills

Python, FastAPI, LangGraph, CrewAI, MongoDB, React (basic), RAG, Vector Search (Pinecone, FAISS), Prompt Engineering, Docker, Kubernetes

Education

B.Tech Computer Science, 2022

Certifications

- LangChain for LLM Application Development (2024)
